

Get your team connected to Ordnami

This takes about 15 minutes. You'll set up Linear, choose the one GitHub repository Ordnami can see, then connect both from your Ordnami account.

YOU'LL NEED

- Admin access to your Linear workspace
- Owner or admin access to one GitHub repo

1

STEP 1

Set up Linear

Free \$0

[Start here](#)

Unlimited members, 2 teams and 250 issues.
Enough to get started with Ordnami.

Basic \$10 per user/month, billed yearly

Upgrade only if you pass 250 issues or need a 3rd team. Business isn't needed.

- ✓ Sign up or log in at linear.app/signup and create your workspace.
- ✓ Check that you're a workspace **Admin** in **Settings** → **Members**.
- ✓ Stay signed in to Linear. You'll approve the Ordnami connection in step 3.

2

STEP 2

Share only one GitHub repository

Ordnami only needs the repository you choose, not your whole GitHub account. When GitHub asks during step 3, pick the account or organization that owns the repo, then:

Repository access

- ☐ All repositories Don't choose this
- ☒ Only select repositories → `your-org/your-repo` then Install & Authorize

To change this later, go to GitHub **Settings** → **GitHub Apps** → **Ordnami** → **Configure**. If you're a repo admin but not an org owner, GitHub may ask your org owner to approve the install.

3

STEP 3

Sign up for Ordnami and connect both

1. Create your Ordnami account at ordnami.ai/signup with your work email.
2. Open **Connections** in the left sidebar.
3. Next to **Linear**, select **Connect**, pick your workspace and approve. Use the Linear admin from step 1.
4. Next to **GitHub**, select **Connect** and pick **Only select repositories**. Both should show **Connected**.

Your teammates: we'll add them for you. Send us their names and work emails.
